October 7, 2020

0.1 API Rest DEMO

0.1.1 Preparación

Creamos un virtual environment de python:

```
[1]: # mkvirtualenv adi-demo -p /usr/bin/python3
# pip install ipython requests
```

```
[2]: # El siguiente código sólo es útil para Jupyter Notebooks
import sys
!{sys.executable} -m pip install requests
```

Requirement already satisfied: requests in /usr/lib/python3/dist-packages (2.23.0)

La API requiere de una autorización previa, podemos obtenerla en: <https://mobilitylabs.emtmadrid.es/> Una vez hemos creado una cuenta (y la hemos verificado) ya estamos listos para comenzar con la demo!

0.1.2 Probando la API

A continuación vamos a acceder a la documentación de la API: <https://apidocs.emtmadrid.es/#api->
Vemos que existe un método para probar la conectividad y disponibilidad de la API:

```
[3]: import requests
result = requests.get('https://openapi.emtmadrid.es/v1/hello/')
```

```
[4]: print(f'Status code: {result.status_code}')
print(f'Contents: {result.content}')
```

Status code: 200

Contents: b'{"APIVersion":{"description":"OPENAPI for public access","version":"00107"},"SourceCli":"2.142.5.115","SourceIP":"2.142.5.115","code":"00","developerPortal":"https://mobilitylabs.emtmadrid.es","instant":"2020-10-07T00:32:57.361595","message":"Hello, here openapi.emtmadrid.es, I am running Ok and I feel good","morehelp":"https://gitlab.com/mobilitylabsmadrid","poweredBy":"Empresa Municipal de Transportes de Madrid, S.A.","versions":["v1","build 06","v2","build 10"]}\n'

Vamos a parsear un poco el contenido de la respuesta para poder utilizarla más fácilmente en Python:

```
[5]: import json
result = json.loads(result.content)
from pprint import pprint
pprint(result, indent=4)
```

```
{  'APIVersion': {  'description': 'OPENAPI for public access',
                    'version': '00107'},
    'SourceCli': '2.142.5.115',
    'SourceIP': '2.142.5.115',
    'code': '00',
    'developerPortal': 'https://mobilitylabs.emtmadrid.es',
    'instant': '2020-10-07T00:32:57.361595',
    'message': 'Hello, here openapi.emtmadrid.es, I am running Ok and I feel '
               'good',
    'morehelp': 'https://gitlab.com/mobilitylabsmadrid',
    'poweredBy': 'Empresa Municipal de Transportes de Madrid, S.A.',
    'versions': ['v1', 'build 06', 'v2', 'build 10']}
```

Ahora ya podemos utilizar el resultado de forma más sencilla:

```
[6]: print('Testing API from {}'.format(result['poweredBy']))
```

Testing API from Empresa Municipal de Transportes de Madrid, S.A.

0.1.3 Autenticación

El primer bloque de funciones disponibles hace referencia a la identificación de usuarios. Este bloque, por seguridad, está restringido a un número determinado de operaciones por segundo además de un límite diario.

Según la documentación, necesitamos dos parámetros: *email* y *password*.

```
[7]: parameters = {
    'email': 'tobias.diaz@uclm.es',
    'password': 'N0osmolesteisenapuntarla'
}
result = requests.get('https://openapi.emtmadrid.es/v1/mobilitylabs/user/login/
↪', params=parameters)

print(f'Status code: {result.status_code}')
```

Status code: 200

```
[8]: result = json.loads(result.content)
pprint(result, indent=4)
```

```
{  'code': '90',
  'data': [],
  'datetime': '2020-10-07T00:33:07.671843',
  'description': 'Error in mobilitylabs_context Init session'}
```

Como resultado de la operación tenemos un código de resultado *200* (OK) y en la respuesta algo bien distinto. No nos queda más remedio que buscar soporte... encontramos un ejemplo de uso en: https://gitlab.com/mobilitylabsmadrid/developers/madrid_no2_sensors_data/-/blob/master/getting_NO2_APIREST/getting_NO2_data_from_dataset_BASIC_EXAMPLE.py

En este ejemplo vemos que **los parámetros se pasan como cabecera del mensaje HTTP**. Recordad que las cabeceras viajan en claro... Miramos más detenidamente la documentación *online* y vemos que, efectivamente, las operaciones (algunas) tienen dos bloques: *header* y *parameter*. Volvemos a intentarlo:

```
[9]: parameters = {
      'email': 'tobias.diaz@uclm.es',
      'password': 'N0osmolesteisenapuntarla'
    }
result = requests.get('https://openapi.emtmadrid.es/v1/mobilitylabs/user/login/
↳', headers=parameters)

print(f'Status code: {result.status_code}')
```

Status code: 200

```
[10]: result = json.loads(result.content)
      pprint(result, indent=4)
```

```
{  'code': '00',
  'data': [ {  'accessToken': '3c0ca263-116d-476a-995a-f87567714aa2',
               'apiCounter': {  'aboutUses': 'If you need to extend the '
                                           'daily use of this API, '
                                           'please, register your App '
                                           'in Mobilitylabs and use '
                                           'your own X-ClientId and '
                                           'passKey instead of generic '
                                           'login (more info in '
'https://mobilitylabs.emtmadrid.es/doc/new-app '
                                           'and '
'https://apidocs.emtmadrid.es/#api-Block_1_User_identity-login)',
               'current': 0,
               'dailyUse': 20000,
               'licenceUse': 'Please mention EMT Madrid '
                             'MobilityLabs as data '
                             'source. Thank you and '
                             'enjoy!',
               'owner': 0},
      'email': 'tobias.diaz@uclm.es',
```

```

        'idUser': '22dadf07-864f-4560-a86a-e8b5313153c6',
        'nameApp': 'OPENAPI MobilityLabs',
        'tokenSecExpiration': 86399,
        'updatedAt': '2020-10-01T16:10:57.2300000',
        'username': 'tobiasdiaz'}]],
    'datetime': '2020-10-07T00:33:13.002070',
    'description': 'Register user: tobiasdiaz with token: '
                  '3c0ca263-116d-476a-995a-f87567714aa2 '}

```

Ahora ya tenemos un token con el que realizar las peticiones de la API:

```
[11]: access_token = result['data'][0]['accessToken']
```

Podemos probar el *token* con la operación *whoami*:

```
[12]: headers = {
        'accessToken': access_token
    }
result = requests.get('https://openapi.emtmadrid.es/v1/mobilitylabs/user/whoami/
    ↪', headers=headers)
print(f'Status code: {result.status_code}')
pprint(json.loads(result.content))

```

Status code: 200

```

{'code': '02',
 'data': [{'_id': '3c0ca263-116d-476a-995a-f87567714aa2',
            'apiCounter': {'aboutUses': 'If you need to extend the daily use of '
                                         'this API, please, register your App in '
                                         'Mobilitylabs and use your own '
                                         'X-ClientId and passKey instead of '
                                         'generic login (more info in '
                                         'https://mobilitylabs.emtmadrid.es/doc/new-app '
                                         'and '
                                         'https://apidocs.emtmadrid.es/#api-

                'control-cache'}

```

0.2 Jugueteando con la API

```
[13]: result = requests.get('https://openapi.emtmadrid.es/v1/transport/bicimadgo/
    ↪bikes/availability/', headers=headers)
```

```
[14]: print(result.status_code)
```

200

```
[15]: result = json.loads(result.content)
pprint(result, indent=2)
```

```
